GET INTO NATURE & CONNECT WITH FAMILY IN CITY NATURE CHALLENGE

Annual global event April 29-May 2 offers opportunity for Puget Sound folks to discover nearby wildlife, help science and get outside safely.

FOR IMMEDIATE RELEASE: April 25, 2022

SEATTLE/TACOMA, Wash. – Learn about the plants and wildlife around you with one quick photo from your phone, while also being an active community scientist during the annual City Nature Challenge. From April 29-May 2, the annual global event asks ordinary folks to become a scientist for an hour, a day, however long they have. And there's no experience necessary. Just download the free [iNaturalist app](#) or access it on your computer, get outside, and start recording what you see.

"We encourage everyone in our community to discover and appreciate native wildlife, whether it's in a yard, park or natural area," said Zach Hawn, conservation engagement coordinator at Point Defiance Zoo & Aquarium. "We are surrounded by native wildlife and it's incredible learning about it, if we just stop and take the time to observe."

Although the event is global, the Seattle-Tacoma metropolitan area represents one project to record and identify wildlife observations during the challenge. Point Defiance Zoo & Aquarium, Northwest Trek Wildlife Park and Woodland Park Zoo are partnering to promote, support, and coach the community in how to use iNaturalist to help science and discover nature and wildlife for themselves.

"It's easy and fun, and it's something your whole family can take part in," said Katie Remine, Living Northwest Conservation Manager at Woodland Park Zoo. "Wildlife is all around us--with just a little bit of exploring, you can tune your eyes and ears to the nature nearby and spark your curiosity!"

The steps are simple. Download the iNaturalist app or access it on your computer, join the City Nature Challenge Seattle-Tacoma Metropolitan Area iNaturalist project, and snap photos of the wild plants, animals and fungi that you see. If you can identify the species right away, good for you! Otherwise, the app's artificial intelligence can make suggestions for you, based on everyone else's previous identifications.

Record your location, time and date, and voila! You're a part of the City Nature Challenge. Observations can be made anytime in iNaturalist. But to count toward the City Nature Challenge, they have to be

recorded from April 29-May 2. Then, anytime through May 8, participants are invited to go in and identify observations-- their own or others. Each observation needs two identifications to be verified.

Individuals can also participate online only by helping to identify the nature observations of others. It's a great way to get outside and explore local parks and trails. It's also a cool way to connect with family or friends, and learn about the native animals and plants that share our habitats here in the Puget Sound region. Even better, the data is used to help real scientists, who can better understand how our regional wildlife is faring, and how to protect it-- from frogs to ferns.

And it's also a chance to make our mark on the world: Every year the region with the most observations is highlighted on the app's homepage, as well as the individuals with the most unusual species spotted.

In 2021, 566 observers took part in the challenge in King, Snohomish and Pierce counties and those scientists submitted more than 7,000 nature observations and identified more than 1,200 species showing the world the incredible biodiversity in the region's home turf. That's the region's record.

Naturalists from Woodland Park Zoo and Point Defiance Zoo & Aquarium are [offering a free online orientation](#) in iNaturalist on April 26 to help those new to the technology (or to nature).

The Seattle-Tacoma location for the City Nature Challenge 2022 includes Everett, Seattle, Bellevue, Tacoma, and all other places in Snohomish, King and Pierce counties. The iNaturalist app is free, and works on all smart devices. It can be used on mobile without WiFi. Observations and photos can also be uploaded to the site on a computer.
